University, Sydney, Australia

B. A. SOUTHGATE
Stevenage, Herts., England

H. I. WATERMAN
Delft, The Netherlands

A. WETTSTEIN
Basle, Switzerland

INTERSCIENCE PUBLISHERS
NEW YORK · LONDON

INSTRUCTIONS FOR CONTRIBUTORS

1. Contributions will be published in English, French, or German and accepted in several classifications:

PAPERS should contain comprehensive accounts of original work in a given field. They should be prefaced by summaries of not more than 150 words in English.

NOTES should contain brief accounts of less complete work or preliminary announcements of original work of importance which warrants immediate publication. They should not exceed 500 words in length.

REVIEWS should constitute critical appraisals of published material, not a compilation of data. Prospective authors of reviews are advised to submit a preliminary communication outlining the field to be covered rather than a complete manuscript.

2. It will facilitate speedy publication of papers if manuscripts are submitted in duplicate, typed double space with one-inch margins. Pages should be numbered consecutively.

3. Manuscripts should be headed with title, author's name and address. In the case of co-authors, all addresses should be given; please indicate which author is to receive correspondence and proofs.

4. References to the literature should be in one of two systems. Either they should be numbered in one consecutive series in the text as unparenthesized superscripts with a correspondingly numbered list of the full references on a separate page. Or, full references should be given in alphabetical order of first authors without numbers on a separate page, only name of author and year of publication appearing in the text (Harvard system). References should not appear as footnotes or in the body of the text. Journal references should consist of the author's name and initials, title of the journal (abbreviated in accordance with the *World List*), volume number, first page number and year. Book references should include author's name, title of book, and complete bibliographical reference.

5. Footnotes, as distinct from literature references, should be indicated by the symbols *, †, ‡; commencing anew on each page. They should not be included in the numbered reference system.

6. Mathematical and chemical symbols, equations, and formulas should be typed or clearly handwritten.

7. All Greek and unusual symbols should be identified in the margin the first time they are used. Characters which may be confused (e.g., K, κ,) should also be identified. Vector quantities should be underlined with a wavy line.

8. Nomenclature should conform to *Chemical Abstracts* usage. Registered trademark names should only be used in a footnote for identification upon first mention in the text, and must be capitalized. Names and addresses of suppliers should also be given in the footnote.

9. Tables should be numbered consecutively, have a title, and, if necessary, a caption or legend so that they may be understood without continuous reference to the text. All table columns should have explanatory headings. Where footnotes to a table are required, they should be noted by superscript letters, $^{a, b, c,}$ etc. Only in exceptional cases may the same data be published in a table and a line diagram.

10. Figures should, if possible, be India ink drawings on either plain white drawing paper or blue coordinate paper. They should be twice the final size required. Lettering should be done in pencil. Clear, sharp, positive photographs are required for halftone reproductions. If there is a choice between a line drawing and a halftone, the line drawing should be used. Figure legends should be typed on a separate sheet and placed at the end of the manuscript. They should be understandable without continuous reference to the text.

11. Authors will receive fifty reprints of their articles without charge. Additional reprints may be ordered and purchased by filling out the form attached to galley proof.

12. Unless requested by the author at the time the manuscript is submitted, no manuscripts or illustrations will be returned.

LIST OF CONTENTS

NUMBER 1

LLOYD L. KEMPE, JOHN T. GRAIKOSKI and PETER F. BONVENTRE: Combined irradiation–heat processing of canned foods: green peas inoculated with anaerobic bacterial spores 1

JOHN F. HARRIS and GEORGE J. HAJNY: Glycerol production: a pilot-plant investigation for continuous fermentation and recovery 9

E. MARGERY LINDAY and P. J. SYRETT: An attempt to determine discriminate use of hydrogen isotopes 25

J. VISSER, D. E. WEINAUER, R. C. DAVIS, W. H. PETERSON, W. NAZAREWICZ and H. ORDWAY: Production and isolation of the antibiotic, oligomycin . . 31

A. RODGERS and D. E. HUGHES: The disintegration of micro-organisms by shaking with glass beads 49

WILLIAM C. PATRICK, III, and ROBERT R. FREEMAN: Continuous centrifugation in virus processing 71

K. L. PHILLIPS, J. F. T. SPENCER, H. R. SALLANS and J. M. ROXBURGH: Effect of antifoam agents on oxygen transfer in deep tank fermentations 81

WILLIAM F. DANIELS and MALCOLM B. SHALE: Theoretical aspects of sterilization of tissue culture medium by depth filtration 93

L. EDEBO and C.-G. HEDÉN: Disruption of frozen bacteria as a consequence of changes in the crystal structure of ice (*Note*) 113

NUMBER 2

L. VALLET: Equipment for the resuspension or redissolving of precipitates in continuous-flow centrifuges 121

GEORGE T. TSAO and LLOYD L. KEMPE: Oxygen transfer in fermentation systems —I. Use of gluconic acid fermentation for determination of instantaneous oxygen transfer rates 129

H. R. BUNGAY, C. F. SIMONS and P. HOSLER: Handling of antifoam oils for fermentations 143

R. L. NORMAN and L. L. KEMPE: Electronic computer solution for the MPN equation used in the determination of bacterial populations 157

F. H. DEINDORFER and JOHN M. WEST: Rheological examination of some fermentation broths 165

F. E. PORTER and H. NACK: Surface culture in the mass growth of bacteria . . 177

V. WITT and J. A. BORCHARDT: The removal of nitrogen and phosphorus from sewage effluents through the use of algal culture 187

F. GUTMANN, F. MOSS and L. LEHOCZKY: A conductance bridge method for the amperometric estimation of low oxygen tension 205

JOHN FREDERICK LEMP, JR.: Polarographic measurement of oxygen supply and demand during aerobic propagation of a bacterial culture 215

P. S. S. DAWSON: Continuous culture experiments with *Saccharomyces rouxii* . 227

NUMBER 3

S. S. BLOCK: Developments in the production of mushroom mycelium in submerged liquid culture 243

DONALD J. MERCHANT, ROBERT J. KUCHLER and WILLIAM H. MUNYON: Population dynamics in suspension cultures of an animal cell strain 253

WILLIAM R. CHERRY and ROBERT N. HULL: Studies and observations on the growth of mammalian cells in agitated fluid medium 267

LOUIS G. NICKELL and WALTER TULECKE: Submerged growth of cells of higher plants 287

ROBERT D. GAFFORD and D. E. RICHARDSON: Mass algal culture in space operations 299

WILTON A. RIGHTSEL, HELEN MCCALPIN and I. WILLIAM MCLEAN: Studies on large-scale methods for propagation of animal cells 313

B. UBERTINI, L. NARDELLI, G. SANTERO and G. PANINA: Process Report: Large-scale production of foot-and-mouth disease virus 327

THOMAS A. GAUCHER, RICHARD J. BENOIT and ADOLPH BIALECKI: Mass propagation of algae for photosynthetic gas exchange 339

ICHIRO CHIBATA, MASAHIKO KISUMI and YOSHITARO ASHIKAGA: Studies on the fermentative production of L-isoleucine 361

NUMBER 4

S. P. Rogovin, F. R. Senti, R. G. Benedict, H. M. Tsuchiya, P. R. Watson, R. Tobin, V. E. Sohns and M. E. Slodki: Clinical-size dextran by direct fermentation (with NRRL B–1351 *Streptococcus sp.*) 381

Wendye E. Johnston and K. J. Ives: Sewage sludge conditioning with sulphur oxidizing bacteria 401

Antal Mizsei and Antal Szabó: Analytical control of the biological oxidation in the production of $\Delta^{1,4}$-androstadiene-3,17-dione 411

H. R. Bungay, M. M. Marsh and R. C. Peterson: Purification process development using radioactive Vitamin B_{12} 419

A. C. Mazumder, A. N. Bose, N. C. Ganguli and B. C. Guha: Pilot plant studies on parboiling of rice—I. Soaking and gelatinization 431

A. C. Mazumder, A. N. Bose, N. C. Ganguli and B. C. Guha: Pilot plant studies on parboiling of rice—II. Dehydration 439

A. C. Mazumder, A. N. Bose, N. C. Ganguli and B. C. Guha: Pilot plant studies on parboiling of rice—III. Effect of hot soaking and mechanical drying on the nutritive value of parboiled rice 447

Lars Edebo: A new press for the disruption of micro-organisms and other cells . 453

Ralph E. Lincoln: Control of stock culture preservation and inoculum build-up in bacterial fermentation 481
